

FEIGNER - PLASTIC DOCK AND BOAT LIFT WHEELS

Our plastic wheels are manufactured using virgin polyethylene resin, UV inhibitors and carbon black pigment. The process makes a tough, rigid wheel that offers high stress/crack resistance, and excellent impact performance in low temperatures. Our plastic wheels resist damage by animals, ice, impacts and prolonged contact with petroleum products. They'll never wear out; never rust on the axle; roll easily over all terrains; and are covered by a 3-year warranty.

They are suitable for roll-in docks or boat lifts. They are easily mounted to a 1 1/2 inch OD axle. Universal mounting hardware is available (see below), or you can fabricate an axle assembly using 1 1/2" galvanized pipe. And they have a load capacity of 1000 lbs per wheel.

Packaging and Shipping Information

- Unit weight 12 lbs per wheel
- 40 wheels per pallet
- Pallet weight 520 lbs
- Pallet size is 4' x 4'
